

Increase the pulling power in the fabric selvedge area significantly with the new **PIRANHA** selvedge-ring solution.

Features of the new **PIRANHA** system:

- Diameter increase** By increasing the outside diameter of each selvedge ring, the Hunziker **PIRANHA** solution allows a significant increase of the temple pulling power in the selvedge area.
- Ring arrangement** This new system enables thanks to the **full interchangeability** of all selvedge rings a wide range of **individual compositions** according to the respective requirements of the fabrics.
- Free combinations** The **PIRANHA** selvedge ring solution can be combined with rubber rolls, rubber rings as well as pinned rings following the selvedge section.
- Fully guided** **All rings** are individually guided by an invisible ellipse **with flange!**
- Colour code** The **ring bodies** are **colour-coded** according to the respective outside diameter for easy identification. The inside bush of the ring is coloured according to the pin height.
- Advantages** More pulling power in the selvedge area means: straighter warp yarns in the reed section hence less machine stop due to yarn breakages, less enlacement necessary, easier weaving of high-contraction fabrics, less fell beat-up in the selvedge.
